According to our (Global Info Research) latest study, the global Elastomers for Pharmaceuticals market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Elastomer is defined as a long chain co-polymer or terpolymer (two or three different monomers in one chain) that contains adequate crosslinks among individual chains. Elastomers are polymers that offer excellent properties such as high elasticity as well as viscosity. They offer low permeability to moisture and gas; as well as high temperature resistance. Elastomers help meet the changing requirements of drug compatibility and cleanliness in pharmaceutical, medical and health care industries. They offer several beneficial properties. For instance, they possess low extractability and leachability. Elastomers are super-clean solutions for sensitive drugs and various other pharmaceutical applications such as pharmaceutical stoppers and container closures.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for

development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
