Elderly rehabilitation training equipment refers to assistive training devices specifically designed for the physical decline, chronic disease, or post-operative recovery needs of the elderly. Its core function is to help the elderly restore or maintain muscle strength, balance, joint mobility, and cardiopulmonary function through scientific and safe training methods, thereby effectively addressing the risks of disability, falls, and decreased self-care abilities caused by aging or disease. The upstream mainly involves suppliers of precision machinery manufacturing, electronic components (such as sensors and motors), artificial intelligence algorithms, and medical materials, providing hardware and technical support; the downstream reaches end-user elderly individuals and care facilities through medical device distributors, rehabilitation medical institutions, nursing homes, and online platforms. In 2025, the production volume of elderly rehabilitation training equipment was approximately 2.6 million units, with an average price of approximately US\$3,000 per unit, a gross profit margin of approximately 30%, and a single-line production capacity of 20,000 units per year.
