According to our (Global Info Research) latest study, the global Electret Masterbatch for Filtration Materials market size was valued at US\$ 51.57 million in 2025 and is forecast to a readjusted size of US\$ 76.27 million by 2032 with a CAGR of 5.9% during review period.

Electret masterbatch for filtration materials is a type of functional masterbatch formulated using resins—such as polypropylene—as a carrier, combined with electret agents and processing aids. It is primarily incorporated into melt-blown non-woven filtration materials and utilized in conjunction with processes such as corona charging or water-jet charging. This application serves to enhance the charge density, charge storage depth, and charge retention capabilities of the fiber web, thereby boosting the filtration material's electrostatic adsorption capacity for pollutants such as fine particulate matter, aerosols, dust, and pollen.

The upstream segment of this industry primarily involves high melt-flow index polypropylene, electret agents, organic fluorine materials, inorganic mineral fillers, dispersants, antioxidants, processing aids, and carrier resins. The midstream segment encompasses formulation design, melt blending, dispersion modification, granulation, as well as filtration efficiency and thermal decay testing; key technical priorities in this stage include electret agent dispersion, charge stability, achieving high filtration efficiency with low additive concentrations, compatibility with melt-blown processing, and batch-to-batch consistency. The downstream segment primarily targets applications in filtration materials such as melt-blown fabrics, filtration layers for face masks, HEPA filtration media, and air purifier filter cartridges.

In 2025, the global sales volume of electret masterbatch for filtration materials is projected to reach approximately 10,000 tons. The average global market price is estimated to range between \$4,000 and \$6,000 per ton, while the gross profit margins for major industry manufacturers are expected to fall within the range of 20% to 35%.
