Abstracts

The global Electric Anchor Hoist market size is expected to reach \$ 158 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

Electric anchor winches are deck machinery that use an electric motor as their core drive, employing a reduction gear, sprocket, or drum to achieve anchor chain deployment, anchoring, and anchor raising/lowering operations. They are widely used on merchant ships, fishing vessels, engineering vessels, and yachts, improving anchoring efficiency, control precision, and operational safety.

Upstream suppliers mainly include those providing motors, reducers, brakes, controllers, steel, castings and forgings, bearings, seals, and electrical components. Downstream suppliers primarily serve the merchant ship, offshore engineering vessel, fishing vessel, harbor tugboat, auxiliary naval vessel, yacht, and ship repair and conversion markets.

The global market price for electric anchor winches is \$1600 per unit, with annual sales of approximately 72,000 units and a global annual production capacity of approximately 80,000 units. The industry profit margin is 18%.
