Electric ball valve actuator is a device that controls the opening and closing of ball valves through electric drive devices. It is widely used in industrial automation control systems. It drives the valve stem to rotate through an electric motor to open or close the valve. It is often used for liquid and gas flow regulation and control, and is suitable for various working environments such as high temperature and high pressure. Electric ball valve actuators can be linked with control systems such as PLC and DCS to achieve remote automation operation. They are divided into two types: switch type and regulation type.
