## Abstracts

The electric bus air conditioner is developed for electric buses. The biggest difference from the traditional automotive air conditioner compressor is that it has its own motor structure drive and controller for control, and only needs to be connected to the power supply and control signal. Power comes from electric vehicle batteries. The warm air heat source of the fuel vehicle air conditioning system is mainly provided by the engine coolant, but the heating system of the electric vehicle is different.

According to our (Global Info Research) latest study, the global Electric Bus Air Conditioning market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
