## Abstracts

According to our (Global Info Research) latest study, the global Electric Carbon Fiber Operating Table market size was valued at US\$ 1675 million in 2025 and is forecast to a readjusted size of US\$ 3144 million by 2032 with a CAGR of 9.4% during review period.

In 2025, global sales of electric carbon fiber operating tables reached 18,500 units, with an average selling price of US\$88,000 per unit. Electric carbon fiber operating tables are high-end medical devices using high-strength carbon fiber composite tabletops and equipped with multi-axis electric drive systems. They possess excellent X-ray transmittance, load-bearing strength, and lightweight characteristics, meeting the image compatibility requirements of orthopedic, neurosurgical, and interventional surgeries. Simultaneously, electric control enables multi-dimensional adjustments such as lifting, tilting, and translation, improving intraoperative positioning accuracy and medical staff efficiency. The industry's total production capacity is approximately 22,000 units per year, with an average gross profit margin of approximately 38%. Upstream raw materials mainly include carbon fiber prepreg, aluminum alloy and steel structural components, electric actuators, electrical control systems, and medical-grade surface materials; downstream, they are supplied to tertiary hospitals and specialized surgical centers through medical device distributors and hospital equipment integrators. The future lies in deep integration with image navigation systems and robotic surgical platforms, upgrading towards intelligence and modularity. With the increasing demand for minimally invasive surgery and precision medicine, the replacement cycle of high-end surgical equipment is accelerating, and companies with material research and development and system integration capabilities will gain continuous business opportunities.
