## Abstracts

According to our (Global Info Research) latest study, the global Electric Cast Steel Control Valve market size was valued at US\$ 149 million in 2025 and is forecast to a readjusted size of US\$ 208 million by 2032 with a CAGR of 3.2% during review period.

In 2025, the global production of electric cast steel control valves reached 457,800 units, with an average selling price of US\$317.25 per unit. The global annual production capacity of electric cast steel control valves is approximately 750,000 units, with a gross profit margin of approximately 23.2%. Electric cast steel control valves are used in fluid systems to regulate and control parameters such as flow rate, pressure, and temperature. They consist of a cast steel valve body, valve core/disc, actuator (electric actuator), and necessary drive and control components. Compared to manual valves, electric cast steel control valves offer automated control capabilities and are commonly used in scenarios requiring remote or automated regulation. The upstream of the electric cast steel control valve industry chain includes cast steel/alloy steel materials, welding materials, valve bodies, and electric actuators; the midstream consists of electric cast steel control valve manufacturers; and the downstream is mainly used in petrochemical, HVAC, and industrial applications.
