According to our (Global Info Research) latest study, the global Electric Cold Isostatic Press market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The electric cold isostatic press is to place the product in a closed container filled with liquid. After the power is turned on, the pressure exerted by the liquid on each surface of the sample is equal. In a high-pressure environment, the density of the product becomes larger, and the gap between the sample particles Get smaller and get the desired shape. With the advancement of science and technology and our in-depth research on powder materials, isostatic presses are more and more widely used in the molding of powder metallurgy, composite materials, refractory materials, ceramics, hard alloys and other materials.
