The global Electric Dehorner market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

An Electric dehorner is a device that uses electricity (electricity) and is specifically designed to remove the horns of livestock, such as cattle. This tool usually uses electrical heating to achieve the dehorning process to reduce or eliminate horn growth. An electric dehorner may be equipped with a tip that has a heating element that, when in contact with the corner, can generate enough heat to cause a dehorning effect. Such equipment is commonly used in agriculture and animal husbandry to improve livestock management and safety.
