According to our (Global Info Research) latest study, the global Electric Energy Automatic Metering System market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

The electric energy metering automation system is the most commonly used marketing system in the marketing strategy of today"s electric power companies. The automation system is an extremely important part of electric power marketing. The electric energy metering automation system mainly consists of communication channels, metering automation terminals, and metering automation during operation. Station and other systems are composed together. The metering automation system can control, collect, and analyze information related to the operation of the power system, and can also conduct all-round supervision and control of the operation of the metering automation system. The electric energy measurement automation system also has functions such as monitoring, measurement management, and collection. The operation of the system can better serve pre-purchased electricity, load control, market management, etc. The metering automation main station system and metering automation terminal can transmit information through information channels, thereby ensuring the perfection and efficiency of information transmission. The structure of the information channel is extremely complex and cumbersome, but it can maximize efficiency. The metering automation terminal is mainly responsible for collecting comprehensive information content. It can also collect more power data information and conduct comprehensive management of information. The information channel can issue instructions to the main station system and then send its information content to other departments.
