## Abstracts

According to our (Global Info Research) latest study, the global Electric Exhaust Cutouts market size was valued at US\$ 340 million in 2025 and is forecast to a readjusted size of US\$ 520 million by 2032 with a CAGR of 6.2% during review period.

In 2025, global Electric Exhaust Cutout output reached about 2.75 million units, with global capacity near 3.6 million units per year. The average unit price is about USD 120, and industry gross margin is approximately 27%. Electric Exhaust Cutouts are electronically actuated valves installed in a vehicle's exhaust system that allow drivers to switch between routed (muffled) exhaust flow and a bypass (straight-through) configuration, typically via a dashboard switch or remote control. By opening the valve, exhaust gases bypass the muffler and catalytic pathway to reduce backpressure and increase sound output; when closed, gases flow through the standard exhaust for noise control and emissions compliance. The supply chain begins upstream with stainless steel or aluminized steel tubing producers, precision casting/forging suppliers for valve housings and butterfly plates, electric motor and gear actuator manufacturers, wiring harness and control module suppliers, and sealing/gasket material providers. Midstream players include exhaust component OEM/ODM manufacturers that design and assemble the cutout units (valve body, motor actuator, control box, remote module) and integrate them into cat-back or axle-back exhaust systems. Downstream, products are sold through automotive performance brands, aftermarket distributors, e-commerce retailers, performance shops, and specialty installers, with end users primarily consisting of passenger vehicle enthusiasts, motorsports participants, and custom vehicle builders.
