## Abstracts

The global Electric Grippers market size is expected to reach \$ 5625 million by 2032, rising at a market growth of 34.8% CAGR during the forecast period (2026-2032).

An electric gripper is a tool mounted on the equipment to grip work pieces. By opening and closing the fingers powered by electric motor rather than pneumatic power, the electric gripper grips and releases work pieces. Electric gripper and pneumatic gripper are two different types of gripper both widely used in various automation applications. Compared with pneumatic grippers, electric grippers are cleaner grippers, need no air lines and save on power and maintenance, and electric gripper is more suitable to be used for detect grip. In 2024, global production of electric gripper reached 320.85 k units, with an average selling price of US\$1626 per unit. Global production capacity in 2024 was approximately 420 k units. The upstream raw materials for electric grippers mainly include electric drive systems, sensor and feedback systems, control systems and interfaces, as well as structural components and materials. In the electric drive system field, Yaskawa Electric and Fuji Electric are the main suppliers, providing high-performance servo motors and direct-drive motors. In the sensor field, Omron and Renesas Electronics provide force sensors and position sensors to achieve precise force and position feedback control. The downstream applications of electric grippers are mainly in the automotive manufacturing, electronics and semiconductor, food and packaging, and logistics and warehousing industries. In the automotive manufacturing sector, electric grippers are widely used in automated production lines for handling, assembly, and welding of automotive parts, improving production efficiency and safety. The electronics and semiconductor industry requires high-precision gripping capabilities, and electric grippers are used in the handling, assembly, and testing of electronic components. In the food and packaging industry, electric grippers are used in food sorting, packaging, and palletizing, demonstrating strong adaptability and meeting

hygiene requirements. Automated sorting and handling in the logistics and warehousing sector also utilizes electric grippers to improve work efficiency and reduce labor costs.

Electric grippers, as key end effectors in industrial automation and robotic systems, have experienced rapid growth globally in recent years. As a crucial component of industrial automation, electric grippers are evolving towards greater intelligence, flexibility, and high performance. With technological advancements and increasing market demand, electric grippers are expected to see wider application in the coming years, becoming a significant force driving the transformation and upgrading of the manufacturing industry.
