Abstracts

According to our (Global Info Research) latest study, the global Electric Heating Elements market size was valued at US\$ 10750 million in 2024 and is forecast to a readjusted size of USD 14540 million by 2031 with a CAGR of 4.5% during review period.

An electric heating element converts electricity into heat through the process of resistive or Joule heating. Electric current passing through the element encounters resistance, resulting in heating of the element. Unlike the Peltier effect, this process is independent of the direction of current flow. A typical Electric heating element is usually a coil, ribbon (straight or corrugated), or strip of wire that gives off heat much like a lamp filament. When an electric current flows through it, it glows red hot and converts the electrical energy passing through it into heat, which it radiates out in all directions.

Global core electric heating elements manufacturers include NIBE, Watlow, Chromalox etc. The top 5 companies hold a share about 25%.

In terms of product type, Tubular Heaters is the largest segment, with a share of 21%. And in terms of application, Appliances has a share about 30 percent.
