Electric heating steam cracking unit refers to a device that uses electric heating to mix hydrocarbon raw materials (such as natural gas, naphtha, etc.) with steam and cracks them at high temperature to produce light olefins such as ethylene and propylene and other chemical products. Compared with traditional fuel combustion heating methods, electric heating steam cracking units do not produce pollutants such as smoke and sulfur dioxide, reducing pollution to the environment. The use of renewable energy electricity can also further reduce carbon emissions and achieve green production.
