Abstracts

The global Electric Height-adjustable Desk market size is expected to reach \$ 5522 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

This report primarily studies electrically height-adjustable desks. Electrically height-adjustable desks are office or work furniture pieces that use a motor to adjust the desktop height, accommodating different usage needs such as sitting and standing. They mainly consist of a desktop, extendable legs, a height-adjusting motor, and a control module. The legs are typically made of steel or aluminum alloy to ensure load-bearing capacity and stability. The motor system can be configured with a single motor or dual motors, and some products support features such as height memory and anti-collision. Electrically height-adjustable desks are widely used in office and home settings, helping to alleviate physical fatigue caused by prolonged sitting, improving user comfort and work efficiency, and representing an important development direction for modern office furniture. In 2025, global sales of electrically height-adjustable desks were approximately 13.12 million units, with an average selling price of approximately US\$273 per unit. The industry's single-line production capacity was approximately 50,000 units per year, with a gross profit margin ranging from 25% to 50%. From a supply chain perspective, the upstream mainly includes metal structural components, motors and control systems, electronic components, and desktop panels, with steel and aluminum profiles and motor control systems being the core cost components. The midstream involves the design, processing, and assembly by the complete machine manufacturers. Downstream applications cover office, home, education, and healthcare scenarios. Demand growth is mainly driven by the popularization of healthy office concepts and the increased penetration rate of ergonomic products, forming a relatively complete industrial chain system.

The growth of the electric height-adjustable desk market is primarily driven by the

increasing popularity of healthy office concepts, the upgrading of corporate office environments, and the expanding demand for remote work from home. With rising awareness of ergonomics, businesses and individuals are increasingly accepting adjustable desks, leading to steady growth in procurement demand from education, healthcare, and public institutions. Meanwhile, technological advancements in core components such as motors and control systems are driving down costs, accelerating product penetration across multiple application scenarios. However, the industry still faces challenges including price competition due to product homogenization, pressure on profit margins from fluctuations in raw material and electronic component prices, and uncertainties in overseas markets due to macroeconomic and trade policy influences. Overall, against the backdrop of increasing demand and intensifying competition, the industry will continue to develop towards intelligent, refined, and multi-scenario applications.

This report studies the global Electric Height-adjustable Desk production, demand, key manufacturers, and key regions.
