According to our (Global Info Research) latest study, the global Electric Hot Water Generators market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The hot water generator works by using the gases/steam produced inside an area and channeling it into water-storage equipment to heat the water. The transfer of heat increases the temperature of the water and heats it. Product types can be classified into electric, solar, and gas. Electric hot water generators are designed to provide fast, efficient and economical hot water for heating and processing by using resistive elements. The boiler automatically controls the energizing/de-energizing steps of the elements to maintain the desired water temperature.
