## Abstracts

According to our (Global Info Research) latest study, the global Electric Linear Transfer Systems market size was valued at USD 456 million in 2023 and is forecast to a readjusted size of USD 788.4 million by 2030 with a CAGR of 8.1% during review period.

Electric Linear Transfer Systems are transfer system which derived by linear motors. This system can be used wherever products have to be transported particularly quickly and precisely. This report studies the Electric Linear Transfer Systems market.

When assembly processes call for the interlinking of complex processes, Electric Linear Transfer Systems are used for the assembly, testing and inspection of components, and in particular when a deep vertical range of manufacture is required. These systems can also be interlinked with rotary indexing systems to accommodate complex tasks.

The various processing stations are arranged in series to form a chain. This linear chain can be easily expanded and/or contracted, and changes in the assembly sequence can be quickly achieved by exchanging or regrouping the station inserts.

In general, Electric Linear Transfer Systems work on the principle of a “smart” track—consisting of multiple linear servomotors—and a “dumb” mover outfitted with powerful magnets. Coordinating the activation of electromagnetic coils in the motors propels the movers around the track.

Bosch Rexroth AG, ATS Automation, Rockwell Automation, Festo and Beckhoff Automation are the top 5 players of Electric Linear Transfer Systems, with about 78%

market shares.
