According to our (Global Info Research) latest study, the global Electric Locomotive market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

An electric locomotive is a locomotive powered only by electricity. Electricity is supplied to moving trains with a (nearly) continuous conductor running along the track that usually takes one of three forms: an overhead line, suspended from poles or towers along the track or from structure or tunnel ceilings; a third rail mounted at track level; or an onboard battery. Both overhead wire and third-rail systems usually use the running rails as the return conductor but some systems use a separate fourth rail for this purpose. The type of electrical power used is either direct current (DC) or alternating current (AC).

The Global Info Research report includes an overview of the development of the Electric Locomotive industry chain, the market status of Freight Transport (Direct Current (DC), Alternating Current (AC)), Passenger Transport (Direct Current (DC), Alternating Current (AC)), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Electric Locomotive.
