## Abstracts

The global Electric Locomotive market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An electric locomotive is a locomotive powered only by electricity. Electricity is supplied to moving trains with a (nearly) continuous conductor running along the track that usually takes one of three forms: an overhead line, suspended from poles or towers along the track or from structure or tunnel ceilings; a third rail mounted at track level; or an onboard battery. Both overhead wire and third-rail systems usually use the running rails as the return conductor but some systems use a separate fourth rail for this purpose. The type of electrical power used is either direct current (DC) or alternating current (AC).

This report studies the global Electric Locomotive production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Electric Locomotive, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
