## Abstracts

The global Electric Lumbar Traction Devices market size is expected to reach \$ 343 million by 2032, rising at a market growth of 5.6% CAGR during the forecast period (2026-2032).

An electric lumbar traction device is a medical device used to apply controlled traction force to the lower lumbar spine, relieving pressure on intervertebral discs, nerves, and muscles. It is widely used in the treatment of lumbar disc herniation, sciatica, spinal stenosis, and other lower back disorders. The device typically features adjustable traction force, traction angle, and treatment time, and is often equipped with automatic control functions to improve patient comfort and treatment effectiveness. The upstream of the industry chain includes motors, linear actuators, sensors, control panels, and frame materials; the midstream involves equipment assembly, software integration, calibration, and quality testing; downstream applications cover hospitals, physical therapy clinics, rehabilitation centers, and home healthcare, providing maintenance, training, and technical support services. In 2025, the global production of electric lumbar traction devices was approximately 190,000 units, with a global average market price of approximately US\$1,200 per unit. The gross profit margin of major companies in the industry is between 35% and 50%. In 2025, the global production capacity of electric lumbar traction devices was approximately 238,000 units.

The electric lumbar traction device market is driven by the rising prevalence of lower back disorders, aging populations, and increasing awareness of non-invasive spinal therapies. Hospitals, physiotherapy clinics, and home healthcare providers use these devices to alleviate pain, improve mobility, and support rehabilitation. Technological advancements, including automated traction control, adjustable force settings, and ergonomic designs, enhance patient comfort and treatment effectiveness. Market

growth is further supported by increased investment in rehabilitation and physiotherapy infrastructure, and the adoption of home-use medical devices. Manufacturers focus on producing reliable, easy-to-use, and safe devices with consistent therapeutic performance. Overall, the market is expected to grow steadily as healthcare providers and patients increasingly adopt electric lumbar traction devices for effective and non-invasive management of lower back disorders.
