## Abstracts

According to our (Global Info Research) latest study, the global Electric Marine Windlass market size was valued at US\$ 121 million in 2025 and is forecast to a readjusted size of US\$ 163 million by 2032 with a CAGR of 4.5% during review period.

An electric marine windlass is a mechanical device used on ships and boats to raise, lower, and control the anchor and its chain or rope. Powered by an electric motor, the windlass provides the necessary force to handle the anchor, making the anchoring process more efficient and less labor-intensive. It typically features a drum or gypsy wheel that engages the anchor chain or rope, and can be operated via a control panel on the deck or remotely from the bridge. Electric marine windlasses are essential for ensuring safe and effective anchoring operations, particularly for larger vessels where manual handling would be impractical. A typical electric marine windlass for 25–45 ft boats sells around US\$1.6k on average, with a plausible range of US\$1.2k–US\$2.7k depending on brand/power; global annual unit sales are roughly 70k.

Electric marine windlasses are steadily moving from optional accessories to near-standard equipment on mid-size recreational and light commercial vessels, driven by rising expectations for convenience, safety, and solo-handling capability. Advances in compact motor design, corrosion-resistant composites, and intelligent control systems (e.g., wireless remotes, chain counters, auto-stop functions) are making units easier to install and more reliable in harsh saltwater environments. Growth is also being shaped by broader boating trends: expanding leisure craft ownership, aging demographics seeking labor-saving equipment, and charter fleets that prioritize user-friendly gear to reduce crew training and anchor-handling incidents. Looking forward, integration with vessel electronics, digital load monitoring, and hybridization with hydraulic systems are

likely to differentiate next-generation products, while sustainability pressures may spur designs emphasizing energy efficiency and recyclability. Overall, the category is evolving from simple anchor handling toward smarter, connected components in the marine systems ecosystem.
