Abstracts

The global Electric Motor Core market size is expected to reach \$ 23590 million by 2029, rising at a market growth of 6.9% CAGR during the forecast period (2023-2029).

Global key players of electric motor core include Changying Xinzhi Technology Co., Ltd., POSCO Mobility and Jiangsu Lianbo Precision Technology Co., Ltd. The top three players hold a share about 10%. The global origin is mainly distributed in North America, Europe, China and Japan, of which China is the largest production region, holding about 73% of the market share. In terms of product type, synchronous motor core is the largest segment, with a share about 49%. And in terms of application, automotive industry motor accessory is the largest application, with a share about 30%.

Motor Core (Iron core or magnetic core) plays a pivotal role in the entire motor. It is used to increase the magnetic flux of the inductor coil and has achieved the maximum conversion of electromagnetic power. And the motor core is usually composed of a stator and a rotor.

The stator and rotor cores of electrical machinery are manufactured using thin sheets stacked together in order to minimize eddy current losses. The laminations are bonded in order to create a stable core.

A general distinction is made between techniques integrated into the punching process (interlocking, full-face bonding or spot bonding) and those downstream from the punching process (welding, clamping, conventional bonding).

In fact, most motor manufacturers choose to buy Stamping dies and Laminations, and produce iron cores by themselves. This report also contains this part of the market.

This report studies the global Electric Motor Core production, demand, key manufacturers, and key regions.
