## Abstracts

The global Electric Obstetrics and Gynecology Operating Table market size is expected to reach \$ 175 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Electric obstetric and gynecological operating tables are electrically controlled medical devices specifically designed for obstetric and gynecological examinations, childbirth, and related surgeries. Driven by a motor, they offer multi-stage adjustments for height, backrest, and legrests, providing stable weight-bearing capacity, precise position control, and safety features, thus improving surgical efficiency and patient comfort. Upstream suppliers include those for motor drive systems, steel structural components, medical mattress materials, controllers, and electronic components; downstream suppliers primarily serve general hospitals, maternal and child health hospitals, specialized hospitals, and medical equipment distributors and procurement systems within medical institutions.

The global average price of electric obstetric and gynecological operating tables is US\$2,350 per unit, with sales of approximately 55,400 units and global production capacity of approximately 60,000 units. The industry profit margin is 18%.

Against the backdrop of continuous upgrades to global healthcare infrastructure and increasing emphasis on maternal and child health, the electric obstetric and gynecological operating table market is developing towards intelligence, comfort, and multi-functional integration. On the one hand, with the rising proportion of older mothers and the increase in minimally invasive gynecological surgeries, the market demand for high-load-bearing, high-stability, and precise electric control systems is increasing, and products are gradually incorporating digital control, position memory, wireless remote

control, and data interface functions. On the other hand, the accelerated construction of hospitals in emerging market countries is driving up the penetration rate of mid-to-high-end electric operating tables. Simultaneously, higher infection control standards are driving upgrades in antibacterial materials and easy-to-clean structural designs, while green energy saving and modular design are also becoming manufacturing trends. In the future, interconnected operating tables combining telemedicine and smart ward systems will become an important development direction in the high-end market.
