Abstracts

The global Electric Operating Table market size is expected to reach \$ 2248 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

Electric operating tables are important medical devices used in hospital operating rooms, primarily designed to provide stable, safe, and adjustable patient positioning during surgical procedures. These devices typically adopt electro-hydraulic or electro-mechanical drive systems and enable multi-angle adjustments of table height, Trendelenburg/reverse Trendelenburg positioning, lateral tilt, back section, leg section, and head section through control panels, foot switches, or remote-control units, meeting the clinical requirements of general surgery, orthopedics, neurosurgery, gynecology, urology, and minimally invasive surgery.

Compared with traditional mechanical operating tables, electric operating tables offer advantages such as precise operation, smooth movement, high load-bearing capacity, and a high degree of automation, effectively improving surgical efficiency and operational convenience for medical staff. Modern electric operating tables are commonly manufactured with stainless steel or carbon fiber materials, providing corrosion resistance, easy cleaning, and compatibility with X-ray fluoroscopy systems. Some high-end models also integrate memory positioning, intelligent control systems, imaging navigation interfaces, and wireless connectivity functions. With the rapid development of minimally invasive surgery, digital operating rooms, and advanced medical equipment, electric operating tables are continuously evolving toward greater intelligence, multifunctionality, and higher precision, becoming one of the core infrastructure devices in modern hospital surgical systems. In 2025, the global average selling price of electric operating tables is estimated at approximately USD 11,000 per unit, with annual global sales of around 130,000 units and an average industry gross

profit margin of about 40%.

In the future, the electric operating table market is expected to maintain steady growth, mainly driven by the increasing number of surgical procedures worldwide, the digital upgrading of hospitals, and the rapid development of minimally invasive surgery. With the acceleration of global population aging, demand for orthopedic, neurosurgical, and oncological surgeries continues to rise, further boosting the procurement of high-end operating tables. Products are evolving toward greater intelligence, multifunctionality, and imaging compatibility. Technologies such as carbon fiber tabletops, wireless control systems, memory positioning, and integration with surgical robots are expected to become more widely adopted. At the same time, hospital construction and improvements in healthcare infrastructure across emerging markets will also serve as important growth drivers for the industry. In the future, market competition will increasingly focus on technological innovation, brand strength, and comprehensive service capabilities, while the trend toward high-end products will become more evident.
