The gearbox of the electronic parking system is one of the key components of the system, which is responsible for converting electronic control signals into mechanical actions to achieve the parking brake of the vehicle. The gearbox usually contains a set of precision gears and motors. When the electronic control unit (ECU) receives a parking command, the motor drives the gear set in the gearbox to rotate, and then applies braking force through mechanical connections (such as cables or push rods) to lock the wheels of the vehicle.
