According to our (Global Info Research) latest study, the global Electric Permanent Magnet Spreader market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The electro-permanent magnet spreader is a lifting tool that combines electromagnetic principles with permanent magnet technology. It is mainly used to transport ferromagnetic materials, such as steel plates, steel pipes, etc. Its working principle is to generate a strong magnetic field through the electromagnet to adsorb metal objects when the power is on. After the power is off, the built-in permanent magnet maintains continuous magnetic force to ensure that the object will not fall off during the handling process. The electromagnetic spreader combines the convenience of the electromagnetic spreader with the safety of the permanent magnet spreader, and can carry out material handling operations efficiently and safely in a variety of industrial environments.
