According to our (Global Info Research) latest study, the global Electric Plate Rolling Machine market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

An electric plate rolling machine is a piece of equipment used to process and shape sheet metal in the construction and engineering sectors. They are primarily used to curl and bend metal sheets, often used to make metal cladding materials for roofs, walls and other structures. This kind of machine is usually powered by an electric motor and equipped with a set of rollers. Through the rotation and adjustment of the rollers, it can curl the metal sheet into shapes of different radii and arcs. The plate rolling machine can handle various metal plates, such as steel plates, aluminum plates, stainless steel plates, etc., and perform precise bending and shaping as needed.
