Abstracts

The global Electric Power Steering Motor for New Energy Vehicles market size is expected to reach \$ 957 million by 2032, rising at a market growth of 3.1% CAGR during the forecast period (2026-2032).

An electric power steering (EPS) motor for new energy vehicles is a key actuator in the EPS system that converts electrical energy into mechanical torque to assist vehicle steering. Controlled by the Electronic Control Unit (ECU), it adjusts torque output in real time based on vehicle speed, steering angle, and driver input to achieve lightweight, precise, and intelligent steering performance. These motors are typically based on BLDC or PMSM technologies and are widely used in BEVs and PHEVs, representing a critical component of electrified chassis systems in new energy vehicles. In 2025, global sales of electric power steering motors for new energy vehicles are projected to reach 26.1 million units, with an average selling price of \$29 per unit and an industry gross margin range of 15% to 40%. The electric power steering (EPS) motor for new energy vehicles industry chain consists of upstream materials, midstream manufacturing, and downstream automotive applications. Upstream includes rare-earth permanent magnets (NdFeB), silicon steel sheets, copper, and bearings, which directly influence motor efficiency and power density. Midstream covers motor design, winding, rotor-stator assembly, and system integration, where key players include Nidec, Bosch, Mitsuba, and Chinese manufacturers such as DARE Auto. Downstream applications are dominated by OEMs producing BEVs and PHEVs. With the rise of intelligent vehicles, EPS motors are increasingly integrated with ADAS, steer-by-wire, and domain control systems, driving the industry toward higher integration and electrification.
