A site dumper is a vehicle designed for carrying bulk material, often on building sites, mining operations, agricultural properties, and other industries. It typically consists of a large open skip mounted on wheels, with the ability to tilt the skip to unload its contents. Site dumpers are smaller and have a lower capacity, typically ranging from 1-10t. Site dumpers' compact size makes them more agile, better suited for navigating tight spaces and uneven terrain commonly found on construction sites. Site dumper can be divided into engine powered site dumper and electric powered site dumper.

This report focuses on electric powered site dumper market. Electric powered site dumpers, as an environmentally friendly and efficient means of transportation, play an important role in on-site operations such as construction sites. Compared with traditional Engine powered site dumpers, electric powered site dumpers have lower noise, less emissions and higher energy efficiency, which is in line with the current green and low-carbon development trend. The electric powered system is relatively simple, which reduces the wear and failure rate of mechanical parts and reduces the difficulty and cost of maintenance. Electric powered site dumpers can be customized according to the needs of different sites to meet the operation requirements under

different working conditions.
