Abstracts

The global Electric Rebar Tiers market size is expected to reach \$ 154 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

In 2025, global Electric Rebar Tiers production reached approximately 267.6 K Units, with an average global market price of around 424 USD per Unit.

Electric Rebar Tiers are portable power tools used to automatically tie reinforcing steel bars, wire mesh, or rebar intersections with binding wire. The machine typically uses a rechargeable battery, motor, wire feeding mechanism, twisting mechanism, cutting mechanism, control unit, and replaceable wire coil to complete rebar tying quickly and consistently, reducing manual labor in construction reinforcement work.

Electric Rebar Tiers' upstream core raw materials mainly include lithium batteries, motors, controllers, sensors, etc. Typical suppliers include Samsung SDI, Panasonic Energy, LG Energy Solution, Murata, EVE Energy, Johnson Electric, Nidec, Mabuchi Motor Infineon, Texas Instruments, STMicroelectronics, NXP, etc. Downstream applications are mainly in prefabricated product factories, building and infrastructure construction, etc.

The single-line capacity of Electric Rebar Tiers varies significantly depending on the level of automation, process integration, and machine complexity. Typical capacity is around 8,000–12,000 units per year, and the industry gross margin is usually in the range of 20%–30%.

Electric Rebar Tiers, powered by lithium batteries, are lightweight and portable, offering one-button fully automatic binding. They boast significant advantages such as high

efficiency, labor-saving, tight and uniform binding, and compatibility with various rebar specifications. They completely overcome the shortcomings of traditional manual binding, which is time-consuming, labor-intensive, and produces inconsistent quality. This significantly reduces labor intensity, improves construction safety and standardization, and provides practical value through long battery life, ease of operation, and durability. They are an ideal modern tool for replacing manual labor in the field of building rebar construction.

Currently, the Electric Rebar Tiers industry exhibits a tiered development pattern globally. In the Asia-Pacific region, China is the core market, with strong demand from infrastructure and residential construction, resulting in leading equipment penetration rates. The Southeast Asian, Japanese, Korean, and Australian markets are steadily growing with the recovery of infrastructure and the advancement of construction mechanization. The European and American markets focus on high-end lightweight designs, intelligent safety, and compliance certifications, with stable demand and high added value. The Middle East, Latin America, and Africa benefit from energy infrastructure and urbanization, and the market is in a rapid adoption phase with enormous potential. The global competitive landscape is diverse. International brands dominate the high-end market with their technological and quality advantages, while Chinese manufacturers are rising by leveraging cost-effectiveness and rapid iteration capabilities. Small and medium-sized manufacturers focus on regional channels and price competition. The industry as a whole is evolving towards standardization, centralization, and globalization.

The industry's development is primarily driven by the upgrading of construction mechanization, labor shortages and rising labor costs, green building and standardized construction policies, coupled with stable global infrastructure investment, the popularization of prefabricated buildings, and expanding overseas market demand, all contributing to strong growth momentum. In the future, with continuous technological innovation, Electric Rebar Tiers will upgrade towards greater intelligence, lighter weight, and longer battery life, expanding application scenarios and steadily increasing global market penetration. As an important sub-segment of construction mechanization, it has vast substitution potential and enormous development potential, and will continue to receive high attention from industrial capital and various industry stakeholders.
