Abstracts

According to our (Global Info Research) latest study, the global Electric Road Tamper market size was valued at US\$ 700 million in 2025 and is forecast to a readjusted size of US\$ 1233 million by 2032 with a CAGR of 8.4% during review period.

In 2025, global Electric Road Tamper production reached approximately 141.67 k units, with an average global market price of around US\$4,800 per unit.

The gross profit margin of major companies in the industry is between 25%–40%.

In 2025, the global production capacity of electric road tampers was approximately 188.89 k units.

Electric Road Tampers are electrically powered compaction machines used to compact soil, sand, gravel, and asphalt in road construction and maintenance projects. Compared with gasoline-powered tampers, electric models offer lower noise, zero on-site emissions, and reduced maintenance requirements, making them suitable for urban construction and indoor or emission-sensitive environments.

The industrial chain of Electric Road Tampers includes upstream components such as electric motors, batteries or power modules, vibration mechanisms, control units, frames, and damping components. The midstream focuses on equipment design, assembly, and performance testing. Downstream applications cover road construction, municipal engineering, landscaping, pipeline backfilling, and infrastructure maintenance, supported by equipment rental, servicing, and after-sales support.
