Abstracts

The global Electric Rotary Type Gripper market size is expected to reach \$ 227 million by 2032, rising at a market growth of 6.7% CAGR during the forecast period (2026-2032).

In 2025, global Electric Rotary Type Gripper production reached approximately 58 k units?with an average global market price of around US\$ 2,350 per unit, and a gross profit margin of approximately 20%-40%. An electric rotary type gripper is a mechatronic end-effector that combines a powered gripping axis and a powered rotary axis within one compact module. A two- or multi-jaw mechanism opens and closes to hold a workpiece, while a servo, stepper or direct-drive motor indexes the part through a specified angle or rotates it continuously through 360 degrees. Encoders, reduction gears or hollow shafts, bearings, sensors, drive electronics and embedded software provide closed-loop control of gripping force, jaw position, rotary speed and torque. Key specifications include jaw stroke, gripping force, rotation range, rated and peak torque, rotary speed, gripping and rotational repeatability, payload, protection class and communication interface. Compared with an electric gripper mounted on a separate rotary table, an integrated rotary gripper reduces installation space, wiring, inertia and commissioning work, while supporting pick-and-orient, flipping, screwdriving, capping, barcode inspection and torque-controlled assembly.
