According to our (Global Info Research) latest study, the global Electric Scooter Charging Pile market size was valued at US\$ 2592 million in 2025 and is forecast to a readjusted size of US\$ 9408 million by 2032 with a CAGR of 20.4% during review period.

Electric Scooter Charging Pile is a device primarily used for the safe and centralized charging of two-wheeled electric vehicles, three-wheeled electric vehicles, and elderly mobility scooters. The product is small and space-saving, easy to install, highly intelligent, and requires no dedicated personnel, making it a convenient service facility with high practical and market investment value. Based on the installation characteristics of Electric Scooter Charging Pile products, they can be divided into wall-mounted charging piles and pole-mounted charging piles. Wall-mounted charging piles include wall-mounted smart charging piles and charging sockets. These products require wall mounting, are small in size, occupy little space, and are easy to install. Pole-mounted charging piles also include the metal brackets needed for the charging equipment; they are high-strength, durable, fire-resistant, and more suitable for China's complex geographical environment, offering a longer lifespan and lower maintenance costs. However, they occupy a larger area and are more complex to install than wall-mounted types.

In 2025, the global Electric Scooter Charging Pile service had a gross profit margin of approximately 30%-50%. The upstream of the industry chain consists of charging pile equipment, with raw materials including chargers, controllers, metal materials, plastic materials, and electronic components. The midstream comprises charging pile construction and operation companies (the companies mentioned in the report), while

the downstream can be implemented in commercial parks, industrial zones, schools, communities, and residential areas, operating and installing through property management partnerships. The industry development model involves upstream manufacturers providing charging pile equipment and operating platforms to operators, who then sign contracts with the property management offices of the communities they are interested in.

Market-driven: Electric bicycle charging and swapping facilities, as essential infrastructure for power replenishment, serve the transportation industry and are a key node in promoting transportation electrification and low-carbon electricity. Driven by the global consensus on 'carbon neutrality,' energy transformation, focusing on low-carbon and green energy development and taking energy conservation and emission reduction as a strategic breakthrough, is unfolding globally. my country's '14th Five-Year Plan' and the 2035 long-term vision outline also clearly state the goal of 'continuously improving environmental quality and accelerating the green transformation of development patterns.' To achieve this goal, promoting green and low-carbon travel is imperative. The safety risks of unauthorized charging are driving charging stations to become a necessity: More and more people are using electric bicycles as a means of transportation. Statistics show that electric bicycles frequently block corridors and are parked haphazardly. Coupled with improper charging, this has led to numerous fires. To avoid danger, many newly built residential communities have included electric bicycle charging stations in their construction plans. The 'Guangdong Province Implementation Measures of the Fire Protection Law of the People's Republic of China' came into effect on July 1, 2022, making the prohibition of electric bicycles from being taken upstairs a general trend, thus making public charging stations a necessity. The emergence of charging stations not only improves safety but also facilitates management and changes the phenomenon of disorderly parking.
