According to our (Global Info Research) latest study, the global Electric SMD Feeder market size was valued at US\$ 407 million in 2024 and is forecast to a readjusted size of USD 669 million by 2031 with a CAGR of 7.3% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

An electric SMD feeder is an automated device used in the surface - mount technology (SMT) process. It is specifically designed to supply surface - mount devices (SMDs), such as resistors, capacitors, integrated circuits, and other small electronic components, to the pick - and - place machine with high precision and efficiency. The 'electric' aspect refers to its use of an electric motor or similar electrical drive mechanism to control the movement and feeding of components.

The electric SMD feeder can accurately position and feed components at a pre - set speed and in a specific order, ensuring smooth and continuous operation of the SMT production line. It is equipped with features like component recognition systems to verify the correct placement and orientation of the components before they are picked up by the pick - and - place machine. This helps to reduce errors in the assembly process and improve production yield. Electric SMD feeders come in various sizes and configurations to accommodate different types and sizes of SMDs, and they are widely used in the electronics manufacturing industry for mass production of printed circuit boards (PCBs).
