Abstracts

The global Electric Soft-Close Doors market size is expected to reach \$ 1586 million by 2032, rising at a market growth of 6.7% CAGR during the forecast period (2026-2032).

In 2025, global Electric Soft-Close Doors production reached approximately 11313 K Units, with an average global market price of around 87 USD per Unit.

Electric Soft-Close Doors are automotive door closing systems that automatically pull a vehicle door from a partially closed position into a fully locked position using an electric motor, actuator, latch mechanism, sensors, and control unit. When the door reaches the first-latch or semi-closed state, the system detects the position and activates the electric closing mechanism to complete the final closing movement smoothly and quietly. In automotive applications, Electric Soft-Close Doors are mainly used to improve comfort, convenience, safety, sealing performance, and premium vehicle experience. They reduce the need for passengers to slam the door, help ensure proper door locking, lower closing noise, and improve perceived quality in luxury cars, premium SUVs, MPVs, and increasingly in higher-end electric vehicles.

Electric Soft-Close Doors, with their unique features of automatic soft-close with a gentle push, quiet and smooth closing, and intelligent anti-pinch protection, solve the pain points of traditional car doors that require force to close, leading to hinge aging and incomplete closure. They also highlight the high-end quality and elegant style of the vehicle, while taking into account driving safety and ride comfort, becoming a core configuration for enhancing vehicle product competitiveness. Their mature mechanical and electronic control integration technology also continuously improves product stability and compatibility. Driven by the wave of intelligent and high-end upgrades in automobiles, the demand for configuration upgrades in new energy vehicles and mid-to-

high-end passenger vehicles, the release of demand for comfort configurations in the aftermarket, and the continuous improvement of consumers' pursuit of driving experience and vehicle class, their development potential continues to be released.

The upstream raw materials for electric soft-close doors mainly include suction locks, controllers, actuators, sensors, etc. Typical suppliers include Johnson Electric, Nidec, Mabuchi Motor, Bosch, Mitsuba, Denso, Brose, Continental, Infineon, NXP Semiconductors, STMicroelectronics, and Texas Instruments. Downstream applications are primarily with passenger car and commercial vehicle OEMs such as Mercedes-Benz, BMW, and Audi.

The annual production capacity of a single automated production line for Electric Soft-Close Doors varies greatly depending on the degree of automation, product complexity, and production shifts. The industry's gross profit margin is typically in the range of 20%-30%.
