Abstracts

The global Electric Soldering Iron market size is expected to reach \$ 964.5 million by 2029, rising at a market growth of 4.4% CAGR during the forecast period (2023-2029).

Global key manufacturers of electric soldering iron include Weller, Hakko, Kurtz Ersa, JBC Tools, Metcal and Guangzhou Yihua, etc, with a total share about 60%.

Asia-Pacific holds the highest market share by region over 40%, followed by North America(25%) and Europe (20%).

Soldering stations, pencils and guns are three major types of the product, where top 1 segment is soldering station, with a share over 75%.

In terms of application, manufacturing makes up most, about 70%.

An electric soldering iron is a hand tool used to heat solder, usually from an electrical supply at high temperatures above the melting point of the metal alloy. This allows for the solder to flow between the workpieces needing to be joined.

This soldering tool is made up of an insulated handle and a heated pointed metal iron tip. Good soldering is influenced by how clean the tip of your soldering iron is. To maintain cleanliness, a user will hold the soldering iron and use a wet sponge to clean the soldering iron tip prior to soldering components or making soldered connections.

In addition to the soldering iron, solder suckers are an important part of the soldering setup. If excessive solder is applied, these small tools are used to remove the solder, leaving only that desired.
