A electric steam sterilizer is a compact, electrically powered appliance designed specifically to sterilize infant feeding items such as bottles, pacifiers, breast pump parts, and teething toys using high-temperature steam. It works by heating a small amount of water to produce steam that eliminates harmful bacteria, viruses, and germs without the need for chemicals. Baby steam sterilizers are typically easy to use, with automated cycles and safety features like auto shut-off and heat-resistant lids. Many models also include drying functions and modular designs to accommodate different item sizes and quantities. This type of sterilizer is popular among parents for its efficiency, speed, and ability to provide a hygienic environment for feeding essentials, ensuring the health and safety of infants during their most vulnerable developmental stages.
