According to our (Global Info Research) latest study, the global Electric Submersible Progressive Cavity Pump market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Electric submersible progressive cavity pump is an electric pump with a progressive screw design that efficiently extracts and delivers fluids from underwater sources. In the petroleum industry, such pumps are commonly used to extract crude oil or other viscous liquids from underground reservoirs. It can handle abrasive or viscous materials and requires low maintenance. The electric submersible progressive cavity pump can be installed underground and powered by electric transmission to transport liquids to the surface. The design of this pump makes it suitable for handling liquids with high viscosity, high temperature or containing suspended particles, providing an efficient solution for production and transportation in the petroleum industry.
