According to our (Global Info Research) latest study, the global Electric Tractor Battery market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Agricultural tractors that use electric motors instead of traditional internal combustion engines are called electric tractors. Agricultural tractors running on electricity have fewer moving parts and use battery networks to generate electricity. Due to the increase of carbon emissions, governments around the world have to establish strict emission standards, which has a negative impact on the development of internal combustion engine agricultural tractors. Due to the electric vehicle technology, the battery life provided by these tractors is expected to be extended, which will also improve efficiency.
