The global Electric Two-wheeler LCD Instrument Cluster market size is expected to reach \$ 1037 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Electric Two-wheeler LCD Instrument Cluster serve as the human-machine interface (HMI) for electric bicycles, electric mopeds, and electric motorcycles. They utilize LCD, segmented LCD, dot-matrix LCD, or TFT-LCD screens to display information such as vehicle speed, battery level, mileage, gear position, fault codes, lighting status, riding modes, Bluetooth connectivity, navigation, and vehicle connectivity data. Typically composed of an LCD screen, a main PCB, an MCU, a driver IC, a backlight module, a housing, buttons or a touch interface, wiring harness connectors, and waterproof sealing structures, these units range from basic display instruments to intelligent central control units featuring Bluetooth, screen casting, OTA updates, diagnostics, and vehicle connectivity capabilities.

The upstream sector for these instrument clusters comprises materials and electronic components such as LCD/TFT-LCD screens, backlights, polarizers, cover glass, touch films, PCBs, capacitors and resistors, MCUs, display driver ICs, power management chips, Bluetooth or communication modules, wiring harness connectors, plastic housings, sealing rings, and waterproof adhesives. The midstream sector involves cluster module design, SMT assembly, final assembly, software development, waterproofing tests, and vehicle integration. The downstream market primarily serves electric two-wheeler OEMs, e-bike system manufacturers, shared mobility fleets, and the aftermarket for repairs and replacements.

Global sales volume is projected to reach approximately 62 million units in 2025, with an average selling price (ASP) of around \$11.20 per unit for mainstream manufacturers;

leading companies in the industry typically report gross margins in the range of 22% to 35%.
