Electric Umbilical Winches are specialized winching systems designed to manage and deploy umbilicals, which are bundled cables or hoses that provide power, communication, and fluids to underwater equipment, such as remotely operated vehicles (ROVs) or subsea installations. These winches use electric motors to control the precise handling, tension, and retraction of the umbilical, ensuring safe and efficient operations in challenging marine environments. They are commonly used in offshore oil and gas exploration, subsea construction, and underwater research, where reliable power and communication connections are crucial.
