The electric vehicle charging port system is the key interface between the electric vehicle and the power grid, and is responsible for charging the battery pack. The system includes charging ports, charging plugs, control circuits, and communication interfaces to ensure the safety, efficiency, and intelligence of the charging process. The charging port is divided into two types according to the standard: AC and DC, and supports multiple charging standards such as Type 1, Type 2, CHAdeMO, GB/T, and CCS. The control circuit automatically adjusts the charging status to protect the battery safety by monitoring parameters such as voltage, current, and temperature. The communication interface supports various protocols such as CAN, PLC, and OCPP to ensure real-time data exchange and status monitoring.
