The market in Asia Pacific is expected to witness significant growth owing to increasing demand for electric vehicle and growing automotive testing infrastructure.

Electric Vehicle Chassis Dynamometer is a testing tool used to measure the performance of electric vehicles (EVs) on a simulated road environment. It consists of a series of rollers that mimic the resistance of the road, and an advanced control system that can simulate a range of driving conditions, including different speeds, loads, and inclines. EV chassis dynamometers are used by manufacturers, research institutions, and regulatory agencies to test the efficiency, power, and emissions of electric vehicles under various driving conditions. They are also used to evaluate the performance of batteries and other components of electric powertrains.
