According to our (Global Info Research) latest study, the global Electric Vehicle DC Charging Station market size was valued at USD 1766.2 million in 2023 and is forecast to a readjusted size of USD 2481.3 million by 2030 with a CAGR of 5.0% during review period.

An electric vehicle DC charging station, also known as a DC fast charger, is a device specifically designed to provide high-power charging to electric vehicles with direct current (DC) power. Unlike AC charging, which is the slower and standard method of charging, DC charging stations deliver a high current directly to the vehicle's battery, enabling much faster charging times. These stations are typically installed in public areas, service stations, or along highways to facilitate long-distance travel for electric vehicle owners. Electric vehicle DC charging stations often have multiple connectors to accommodate different types of electric vehicles and utilize advanced communication protocols for seamless and efficient charging.

Global EV sales continued strong. A total of 10,5 million new BEVs and PHEVs were delivered during 2022, an increase of +55 % compared to 2021. China and Europe emerged as the main drivers of strong growth in global EV sales. In 2022, the production and sales of new energy vehicles in China reach 7.0 million and 6.8 million respectively, a year-on-year increase of 96.9% and 93.4%, with a market share of 25.6%. The production and sales of new energy vehicles have ranked first in the world for eight consecutive years. Among them, the sales volume of pure electric vehicles was 5.365 million, a year-on-year increase of 81.6%. In 2022, sales of pure electric vehicles in Europe will increase by 29% year-on-year to 1.58 million.
