Abstracts

The global Electric Vehicles (EVs) market size is expected to reach \$ 625760 million by 2029, rising at a market growth of 14.2% CAGR during the forecast period (2023-2029).

Global key players of Electric Vehicles (EVs) include Tesla, BYD, BMW, Volkswagen, etc. The top four players hold a share over 50%. China is the largest production region, has a share about 53%, followed by Europe, with share 35%. In terms of product type, BEV is the largest segment, occupied for a share of 65%, and in terms of application, Home Use has a share about 75%.

EVs are vehicles that are either partially or fully powered on electric power. Electric vehicles have low running costs as they have less moving parts for maintaining and also very environmentally friendly as they use little or no fossil fuels (petrol or diesel).

Plug-in hybrid electric vehicles (PHEVs) use batteries to power an electric motor and another fuel, such as gasoline, to power an internal combustion engine (ICE). PHEV batteries can be charged using a wall outlet or charging equipment, by the ICE, or through regenerative braking. The vehicle typically runs on electric power until the battery is nearly depleted, and then the car automatically switches over to use the ICE
