Abstracts

The global Electric Wastegate Valve Actuator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

At present, if the difference of driving signals is taken into account, the wastegate valve can be divided into pneumatic actuator, electronic actuator and wastegate which need to be independently modified. At present, the vast majority of turbocharged vehicles on the market still use pneumatic actuator, and some new generation turbocharged engines start to use electronic actuator. Its biggest feature is through the perception of intake pressure in the engine management system (ECU) Or the electronic booster controller (electronic water hose system) will open the bypass valve after sending the signal to the motor, so as to slow down the speed of the fan blade at the exhaust gas side and reduce the boost value at the compression side.

This report studies the global Electric Wastegate Valve Actuator production, demand, key manufacturers, and key regions.
