The global Electric Zoom Lens market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Motorized zoom lens is an optical element that can achieve zooming by motor. It usually consists of multiple lenses, which can focus and disperse light by changing the relative position and shape of the lenses, thereby changing the focal length and magnification. Motorized zoom lenses are widely used in video cameras, telescopes, microscopes, laser rangefinders and other fields. It can realize functions such as long-distance observation, high-precision measurement, and fine imaging. Compared with manual zoom lenses, electric zoom lenses have higher precision and stability, and can realize functions such as continuous zoom and auto focus, thereby improving the performance and efficiency of the optical system. The design of the motorized zoom lens needs to consider many factors, such as parameters such as the number, shape, material, and curvature of the lens, as well as parameters such as the accuracy, speed, and stability of the electric drive device. In addition, the manufacture of motorized zoom lenses requires high-precision processing and testing technology to ensure their optical performance and stability.
