A breaker is a device that interrupts the power supply when the current exceeds the rated value. When the load current exceeds the rated current, the power supply is cut off to prevent damage to outlets and equipment. A painted iron box or insulating resin is used for the outer box.

An electrical breaker panel is a device that distributes electricity to the point of demand. Generally, they are installed indoors, but depending on the specifications, they may also be installed outdoors. When an overcurrent or leakage current occurs on the load side, the power supply is cut off to prevent fire or electric shock. Electrical breaker panels are widely used in homes and factories.
