The electrical conductive flooring market refers to the industry involved in the production, distribution, and installation of flooring materials that have conductive properties. These types of flooring are designed to dissipate static electricity and protect sensitive electronic equipment, people, and processes from electrostatic discharge (ESD).

Electrostatic discharge (ESD) can endanger the quality and functionality of your important electronics. When electronic components are produced or installed they need to be effectively protected from these possible discharges. Even discharges of as little as 100 V, which are not noticeable to a human being, can damage sensitive components.
